Team ID	Individual
Name	Boyapati Rishi
Project Name	Digital Metro Ticket Booking System using ServiceNow
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. For this project, the brainstorming activity focuses on identifying practical ideas to automate the metro ticket booking process using ServiceNow.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Selected Problem Statement

Passengers need a convenient digital method to book metro tickets without depending on manual ticket counters. The booking process should collect source, destination, passenger type, and number of tickets, calculate the fare automatically, generate a digital ticket with a QR code, and provide a structured way to manage and track the booking through ServiceNow.

Project Requirements

Software Requirements

- ServiceNow instance (Personal Developer Instance or Enterprise Instance)
- Service Catalog and Catalog Item support
- Client Scripts / Catalog Client Scripts for form validation and dynamic behavior
- Server-side scripting or Flow Designer for fare calculation and ticket processing
- QR code generation/integration support
- UI Pages or ServiceNow portal interface for displaying digital ticket details

Hardware Requirements

- Standard desktop or laptop computer
- Minimum 4 GB RAM (8 GB recommended)
- Stable internet connection

Step-2: Brainstorm, Idea Listing and Grouping

The following ideas were generated and grouped according to the main activities involved in the digital metro ticket booking process.

Ticket Booking

- Create a Service Catalog item for metro ticket booking.
- Collect source, destination, passenger type, and number of tickets through the booking form.
- Validate the selected source and destination before submitting the request.

Fare Calculation

- Automatically calculate the fare based on source, destination, passenger type, and number of tickets.
- Apply the appropriate passenger category and ticket quantity during fare calculation.
- Display the calculated fare as part of the booking process.

Digital Ticket & QR Code

- Generate a unique digital ticket after successful booking.
- Generate a QR code containing the required ticket/booking information.
- Display the digital ticket and QR code through the ServiceNow interface.

Station Details Mapping

- Maintain station details required for source and destination selection.
- Map station information to support fare calculation and ticket generation.

Tracking & Data

- Maintain booking and ticket details for reference.
- Allow users to view the status/details of their booking.
- Use digital booking data to identify passenger usage and peak-time patterns.

Step-3: Idea Prioritization

The ideas are prioritized based on their importance to the project and their feasibility within a ServiceNow Personal Developer Instance.

Idea	Importance	Feasibility	Priority
Service Catalog metro ticket booking form	High	High	1
Automated fare calculation	High	High	2
QR-code digital ticket generation	High	High	3
Station details mapping	High	High	4
Booking/ticket tracking and data insights	Medium	High	5

Final Selected Idea

Automate digital metro ticket booking using a ServiceNow Service Catalog item, automated fare calculation, QR-code digital ticket generation, and station details mapping.

Reason for Selection

This idea is selected because it directly addresses the problem statement, improves commuter convenience, reduces manual ticketing effort, supports automated fare calculation and digital ticket generation, and is feasible to implement using the available ServiceNow features.
