PROJECT DEMONSTRATION

Metro Ticket Booking and QR Ticket Generation in ServiceNow

Project Summary

A ServiceNow-based digital metro ticketing project designed to simplify and automate metro ticket booking through the Service Catalog. The system enables users to select source and destination stations, choose the journey type and passenger details, automatically calculate the fare, and generate a digital metro ticket with a QR code. The project uses ServiceNow catalog configuration, client-side automation, UI policies, and scripting to provide a faster and more convenient ticket-booking experience.
