Project Development Phase

Project Testing & Validation

Date	10 September 2026
Team ID	Individual
Name	Boyapati Rishi
Project Name	Digital Metro Ticket Booking System using ServiceNow
Maximum Marks	4 Marks

Digital Metro Ticket Booking Request Testing:

The project shall validate the ServiceNow metro ticket booking process from Service Catalog submission through station validation, automated fare calculation, digital ticket generation, QR-code generation, ticket access, and end-to-end completion.

S.No.	Parameter	Values / Test Description	Expected Result	Actual Result	Pass/Fail
1	Service Catalog Item	Verify that the Metro Ticket Booking catalog item is created and accessible.	Catalog item opens successfully and displays Source, Destination, Passenger Type, and Number of Tickets.	To be updated after validation.	Pending
2	Booking Submission	Submit a booking with valid Source, Destination, Passenger Type, and Number of Tickets.	All valid values are accepted and the booking request is submitted successfully.	To be updated after validation.	Pending
3	Required Field Validation	Submit the form with one or more mandatory booking fields left blank or with invalid selections.	The system prevents submission and displays appropriate validation feedback.	To be updated after validation.	Pending
4	Station Details Mapping	Select valid Source and Destination stations and verify the configured station mapping.	Selected stations are recognized correctly and the mapped route/fare information is available for processing.	To be updated after validation.	Pending
5	Fare Calculation	Submit valid journey, passenger type, and ticket quantity details and verify the calculated fare.	The system calculates the applicable fare automatically using the configured fare logic.	To be updated after validation.	Pending
6	Digital Ticket Generation	Complete a valid booking and verify the generated digital ticket.	A digital ticket is generated with source, destination, passenger type, quantity, and fare details.	To be updated after validation.	Pending
7	QR Code Generation	Verify the QR code associated with the generated digital ticket.	A QR code is generated and displayed with the digital ticket using the required ticket information.	To be updated after validation.	Pending
8	Ticket Tracking / Access	Open the submitted booking/ticket and verify its stored details and status.	The passenger can view the booking/ticket information and the generated QR code.	To be updated after validation.	Pending
9	Automation / UI Validation	Verify configured client/server logic, workflow automation, and ticket display after submission.	Configured automation executes correctly and the expected ticket information is displayed without workflow errors.	To be updated after validation.	Pending
10	End-to-End Validation	Execute the complete flow: catalog submission → validation → station mapping → fare calculation → digital ticket → QR code.	The complete metro ticket booking lifecycle works without missing data, calculation errors, or workflow breaks.	To be updated after final end-to-end validation.	Pending
