User Acceptance Testing (UAT)

Date	11 September 2026
Team ID	Individual
Name	Boyapati Rishi
Project Name	Digital Metro Ticket Booking System using ServiceNow
Maximum Marks	4 Marks

Project Overview:

Project Name: Digital Metro Ticket Booking System using ServiceNow

Project Description: A ServiceNow solution that provides a standardized Service Catalog item for passengers to book metro tickets by entering Source, Destination, Passenger Type, and Number of Tickets, followed by automated fare calculation and digital QR-code ticket generation.

Project Version: 1.0

Testing Period: 9 September 2026 to 11 September 2026

Testing Scope:

• Service Catalog metro ticket booking item accessibility and form behavior.

• Capture of Source, Destination, Passenger Type, and Number of Tickets.

• Station details mapping and validation for the selected journey.

• Automated fare calculation based on configured fare logic.

• Digital ticket generation and QR-code generation.

• Ticket viewing/tracking and booking record validation.

• Configured ServiceNow client/server logic and workflow automation.

• End-to-end booking from submission through QR-ticket availability.

Testing Environment:

URL/Location: ServiceNow Personal Developer Instance (PDI)

Credentials: Tester uses the authorized ServiceNow instance credentials; credentials are not recorded in this document.

Test Cases:

The following UAT cases are mapped specifically to the Digital Metro Ticket Booking System using ServiceNow.

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Verify Metro Ticket Booking catalog item	1. Open ServiceNow. 2. Navigate to Service Catalog. 3. Open the Metro Ticket Booking catalog item.	Catalog item is accessible and displays the required booking form fields.	To be recorded during UAT	Pending
TC-002	Verify required booking information is captured	1. Open the catalog item. 2. Select Source and Destination. 3. Select Passenger Type. 4. Enter Number of Tickets. 5. Submit the request.	The booking is submitted with all entered journey and passenger details.	To be recorded during UAT	Pending
TC-003	Verify booking request and ticket record creation	1. Submit a valid metro booking. 2. Open the generated request. 3. Verify the booking details and related ticket record.	A booking/request record is created and retains the submitted catalog variables.	To be recorded during UAT	Pending

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-004	Verify station details mapping	1. Submit a valid booking. 2. Verify Source and Destination values. 3. Check the configured station mapping used by the booking.	Selected stations are recognized correctly and the required route/station information is available for fare processing.	To be recorded during UAT	Pending
TC-005	Verify automated fare calculation	1. Enter valid Source and Destination. 2. Select Passenger Type. 3. Enter Number of Tickets. 4. Submit the request. 5. Verify the calculated fare.	The system calculates the applicable fare automatically using the configured fare logic and ticket quantity.	To be recorded during UAT	Pending
TC-006	Verify digital ticket generation	1. Complete a valid booking. 2. Open the generated ticket. 3. Verify journey, passenger, quantity, and fare details.	A digital ticket is generated and contains the required booking and fare information.	To be recorded during UAT	Pending
TC-007	Verify QR code generation	1. Complete a valid booking. 2. Open the digital ticket. 3. Verify the QR code is generated and displayed.	A QR code is generated from the required ticket information and is displayed with the digital ticket.	To be recorded during UAT	Pending
TC-008	Verify ticket access and tracking	1. Open the submitted booking/ticket. 2. Review ticket status and details. 3. Verify the QR code and journey information.	The passenger can view the booking/ticket details and access the generated QR code.	To be recorded during UAT	Pending
TC-009	Verify ServiceNow automation	1. Review configured client/server logic or workflow. 2. Execute the related booking scenario. 3. Review the resulting record and ticket changes.	Configured automation executes under its defined conditions and produces the intended booking/ticket result.	To be recorded during UAT	Pending
TC-010	End-to-end metro ticket validation	1. Submit a Metro Ticket Booking request. 2. Verify booking record. 3. Verify station mapping. 4. Verify fare calculation. 5. Verify digital ticket. 6. Verify QR code and final ticket access.	The complete metro ticket booking flow works from passenger submission through fare processing and QR-ticket availability without missing data or workflow breaks.	To be recorded during final UAT	Pending

Bug Tracking:

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	No defect recorded at document preparation.	If a defect is found, record the exact steps used to reproduce it.	Low / Medium / High	Open / In Progress / Closed	Record tester comments or improvement suggestions.

Sign-off:

UAT Notes & Final Validation

Notes:

• Ensure that all UAT cases cover both positive and negative scenarios, especially invalid or missing booking inputs.

• Record detailed tester feedback, including suggestions for improving the metro ticket booking experience.

• Bug tracking should include severity, status, and exact steps to reproduce any issue.

• Verify fare calculation, station mapping, digital ticket generation, and QR-code behavior before final deployment.

• Obtain the required project sign-off before proceeding with deployment.

UAT Completion Checklist

Validation Area	Completion Status
Service Catalog & booking variables	Pending UAT
Station details mapping	Pending UAT
Automated fare calculation	Pending UAT
Digital ticket generation	Pending UAT
QR code generation	Pending UAT
End-to-end booking workflow	Pending UAT
Final project sign-off	Pending
